Legit Data Entry Jobs from Home

1. AccuTran Global – AccuTran Global is mostly known as a transcription company, which is fair since that's mostly what they bring on independent contractors to do. However, they sometimes have data entry jobs as well, so it's best to keep your eye out. Check the link for my overview of the company, detailing what it's like for their transcriptionists: it's likely to share similarities to what they expect of data entry specialists.

2. Axion Data Entry Services – Axion is one of those legit opportunities who rarely have openings, but it can be good to be registered in their database for when they do. They also only work with independent contractors. In order to qualify with them, you should have 2 to 3 years experience in data entry. They require a typing speed of 50 WPM (15,000 keystrokes per hour) with no errors. They pay by a flat rate by the page (or project) so it really does pay to be fast and accurate. Axion requires a nominal fee to keep you registered in their database in case of future openings – despite this, they are not a scam.

3. Birch Creek Communications – BCC periodically looks for people to do data entry; when they do, they're looking for independent contractors just like everyone else. Pay is by the job and your performance, with their uppermost pay range going to those with consistent near-perfect accuracy. You can set whatever schedule you wish with them, but it looks like work is most widely available Monday through Friday on a corporate schedule.

4. Clickworker – Clickworker allows you to sign up and become part of a pool of folks who complete tasks for Clickworkers' clients. Data entry is one of those tasks, and others include proofreading, copy editing, web research, surveys, and more. Once you sign up (for free), you fill out your profile and complete short assessments to demonstrate your abilities. The number of jobs available to you depend on how well you perform, and providing excellent work means your earnings will increase. You work your own schedule, they take care of invoicing, and you're paid either monthly or weekly through PayPal.

5. DionData Solutions – DionData Solutions is currently looking for Data Entry Professional Operators who type 60 WPM with a high degree of accuracy. You should be proficient with computers, able to handle Internet, email attachments, and both downloading and opening files. You'll be working independently, so you should have a high degree of self-discipline. They also expect their data entry specialists to work on multiple projects simultaneously while sticking to deadlines. U.S. citizenship is a requirement for the position.

6. The Smart Crowd – The Smart Crowd is part of Lionbridge, providing their registered workers a pool of available microtasks – many of which revolve around data entry. You work when you want and as much as you want. Pay rates vary and are advertised both as competitive and corresponding to your productivity. To work with them, register on their site for free: they evaluate you and then match you with tasks that fit your skills. Payment is issued once a month.

7. SigTrack – SigTrack works with independent contractors to record whether petition signers are voters or to process voter registration and other forms. Since this work revolves around the petition season, they only hire at certain times. Pay is per work unit based on accuracy, and they require that you maintain at least 98% accuracy to satisfy your contract and also peer review others' work. They pay via PayPal. This position is only available to U.S. citizens and you'll be required to do a short Skype call during the interview process to establish identity. Equipment requirements are pretty standard, but note that they require dual monitors.

8. Microworkers – Microworkers, as the name implies, is another microtask site. They offer a variety of tasks, and some of those may include data entry. Some of the jobs they offer actually pay better than similar jobs on other microtask sites. They also show you a percentage on each job that demonstrates how often that job poster has approved the work of previous workers. Your only paid for approved work, so that's useful! Payment for completed jobs goes directly to your PayPal account once you hit their $10 payout threshold. Be vigilant against scam jobs offered through Microworkers.

9. Amazon mTurk – Amazon Mechanical Turk is the lion of microtask sites and you can find data entry work among their thousands of available tasks. Once you register with their site, you can select HITs (Human Intelligence Tasks) that sound interesting to you; sometimes, you must complete a qualifier to land the task. You're only paid if your work is accepted. There can be some shady tasks listed on mTurk, so be careful and don't pick up any HITs that feel wrong. Payment is made via Amazon gift cards or through bank deposit.

10. Working Solutions – Working Solutions periodically offers work that involves data entry. In order to work with them, you'll need to fill out an online application and follow it up with taking some assessments. They'll contact you afterward – their website says this step can take up to 2 weeks – with acceptance or rejection. Once you're an agent, you will have the opportunity to review and put yourself forward for programs you think match your skills. Each program pays differently, and payment is made either via direct deposit or mailed check.

11. Appen – This company may be most well-known for its search engine evaluator jobs, they also offer a variety of "microtask" positions at any given time that may involve some type of data entry or data collecting. Many are short-term and project-based.

Sometimes they are one-time tasks. For example, when updating this post they had an opening for a one-time Facebook Search survey that you could complete upon invitation every 42 days. It may not be much, but it's a little extra spending money.

12. **Lionbridge** – This is another company known for evaluator and assessor jobs, but they also offer a variety of other small tasks. One such task that may fit into the field we are talking about today is annotation. In some of these roles, you are simply labeling images. In other annotation roles, you will be helping improve their AI software. Appen and Lionbridge are both adding to their remote roles frequently. Even if you don't see something of interest now, check back often.
